

Lust

Wow, looks like he has a really big...cowlick.

# Your Guy Is About to Get Very Lucky

When satisfied doesn't begin to describe how happy you want your man to be when you're done with him, break out these top Cosmo techniques.

- Triple his pleasure by licking his penis and teasing his nipples with your fingertips at the same time.
- Go hot and cold. During oral, suck in air as you go down and blow it out as you go back up.
- Try some ball-on-ball action. Cup his boys and gently rub them against each other.
- As you're going down on him, shake your head from side to side, letting your tongue follow the same pattern on the extra-sensitive underside of his penis.
- A new position for oral: Have him kneel on all fours, with your head between his legs. Grab his butt so you can take him in as deeply as possible.
- Massage his P with your V. Sit on top of him so that his lubed-up penis is against your lady bits. Slide back and forth.
- Right before he climaxes, squeeze the base of his shaft with one hand, and stroke the spot between his balls and his butt with the other. The combo will make his O wicked intense.

## What Average Really Looks Like

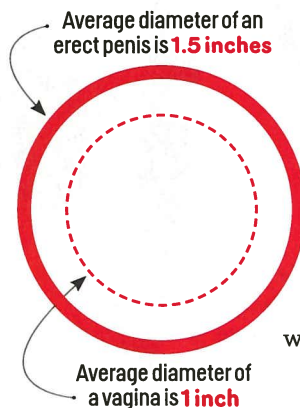

Want to know how your dude stacks up? You can't exactly bring a ruler to bed, but you can "accidentally" drop a Sharpie in his lap. The average erect penis is 5½ inches, about the length of the iconic marker, shown above.

## DOES YOUR SIZE MATTER?

Readers often e-mail us saying they worry they're not tight enough for their partner's penis. But there's generally no reason for concern. Check out the shapes and stats at left. These prove it's highly unlikely that you wouldn't feel super snug to a guy.

## You Know What They Say About Small Index Fingers...

Next time you're out with a new guy, get a good look at his digits. According to one legitimate study, a dude whose index finger is shorter than his ring finger is more likely to have a larger penis.

## Feel-Good Moves for Every Shape

Penises can take many forms, and there are perks to almost all of them. Here's how to get maximum satisfaction no matter what he's got going on.

### **CURVED TO ONE SIDE**

With a slight curve, your guy may hit a sweet spot you never knew you had. Once he's inside you, move your hips from side to side until you find a position that provides a little extra *mmmm*.

### **CURVED TOWARD HIS NAVEL**

This shape is perfect for stimulating your G-spot. Have him get on top of you in a modified missionary position with your legs wrapped around his waist.

### **WIDER THAN IT IS LONG**

You-on-top is best for a guy this size since it'll allow him to go as deep as possible. To make him feel even bigger, gyrate in a circular motion, and let him hit every inch of your vaginal walls.

### **LONG AND THIN**

Doggie-style is great for accommodating a longer guy. The position takes up some of the length, making it extra comfy for you. For more pleasure, contract your PC muscles while he's inside you.

## Handle With Care

**Turns out, your guy actually can fracture his penis. See, if he slips out midthrust and you accidentally come down on him with your pubic bone, the inside of the penis—called the corpus cavernosum—will rip. Expect a really loud popping noise followed by a ton of swelling and bruising. It's definitely rare, but researchers found it's more likely to happen when you're on top and when you're getting it on somewhere out of the ordinary—like in a car or an elevator. When you're moving in ways that are unpredictable, he's more likely to, uh, miss his mark.**

## It Really Is a Tool

Ever wonder why the penis has such an oversize head and ridge? According to evolutionary psychologists, it's shaped that way so guys can scoop out semen left by sexual rivals. This phenomenon, called semen-displacement theory, also suggests that guys thrust harder and deeper when they've gone a while without having sex with their partner in order to outdeliver the competition.

## D Word vs. the C Word

Guys have strong feelings when it comes to what you call their junk, and they tend to fall into one of two categories: They either like the word that rhymes with stick... or the one that rhymes with sock.

So what should you call it?

According to our poll, 61 percent of dudes prefer the D word. Experts say guys are actually less intimidated by it. "Talking about their penis is difficult enough for men, so the word that seems most common and normal is going to be the one that they're more comfortable with," says sex therapist Tiger Devore, PhD.

**He's the whole package.**
